*DEAR GOVERNER COOPER:*

*Please make sure that your state agencies DO NOT approve permits for the Atlantic Coast Pipeline tomorrow, as sources have indicated they are planning to do.*

Building pipelines and natural gas plants that transport fuels and electricity over long distances is a path back to the 20th century. Duke's argument that we need "better infrastructure" to deliver needed natural gas due to colder weather is specious and circular. Melting Arctic ice causes changing wind patterns that bring colder weather. Increasing our use of fossil fuels, eg. natural gas, as a direct consequence of completing the ACP, would also increase the colder weather and thus the argument becomes circular and spirals to more damage to the environment.

Apply common sense and logic to your decisions and use of power. I have a responsibility to my grandchildren to maintain our planet through the use of sustainable fuels, and so do you.

Sincerely,

Kimberly Lillig
